

Discover how Acano Manager 2.3 enables quality video conferencing

Acano Manager 2.3 will help you increase take-up of your video conferencing service and deliver higher returns on your investment. Designed to help you scale sustainably from one Acano call bridge to full global clusters, it enables you to deliver consistent in-call experiences and continually improve your service.

EASY INSTALLATION AND AUTOMATED USER PROVISIONING

Acano Manager is distributed as a virtual machine appliance or as a standalone Windows installation

Once installed, Acano Manager rapidly provisions users from LDAP or Active Directory, enabling user management from your existing corporate systems. Start small and grow to manage thousands or even tens of thousands of users sustainably.

SELF-SERVICE APPROACH DELIVERS SUSTAINABLE SCALABILITY

Users can schedule and hold their own calls using familiar tools

Acano Manager's Microsoft Outlook plug-in enables users to schedule their own calls in the same way they would any other meeting. Participants then join the call using your existing enterprise communications platform, such as Skype for Business.

MULTI-TENANCY MEANS HIGHER ROI

Provide video conferencing to multiple customers or business areas using the same infrastructure

Multi-tenancy enables you to deliver video conference services to more than one customer or business area, using the same Acano hardware. Squeeze every last bit of value from your infrastructure investment, safe in the knowledge that each customer is operating in its own secure environment.

CONTROL YOUR VIDEO CONFERENCING SERVICE IN ONE PLACE

Single view of call activity means your operations team can deliver even better service

Acano Manager 2.3 uniquely brings together everything call operators need, dramatically increasing productivity and their ability to support large numbers of calls.

IN-DEPTH ANALYTICS AND REPORTING

Review performance of your video conferencing service through customisable reports

Use these insights to demonstrate system take-up and ROI, support budget requests, plan for the future and pinpoint issues with your service.

Choose the right version of Acano Manager for your needs

Implement a high-quality service that meets your requirements, wherever you are on your video conferencing journey. Choose from our Standard, Advanced and Pro editions. If you're not sure which is best for your needs, give us a call and we'll help you make the right choice.
