

VQ DMA takes you on a migration journey from Cisco TMS

VQ will be with you on your migration journey.

For organizations running TMS and considering replacing TMS there are a few options:

- 1. Stick with TMS** and keep the situation under review. Perhaps a suitable strategy where the current platform does all that is needed of it, video infrastructure isn't critical to the business and/or there is uncertainty about future communications strategy decisions
- 2. Migrate to the WebEx cloud** for device registration, either directly or via WebEx Edge for Devices
- 3. Implement DMA from VQ.** The only on-premise deployed option for Cisco video endpoint management available on the Cisco pricelist. A secure, scalable and robust platform with demonstrated history of feature enhancement and long term development

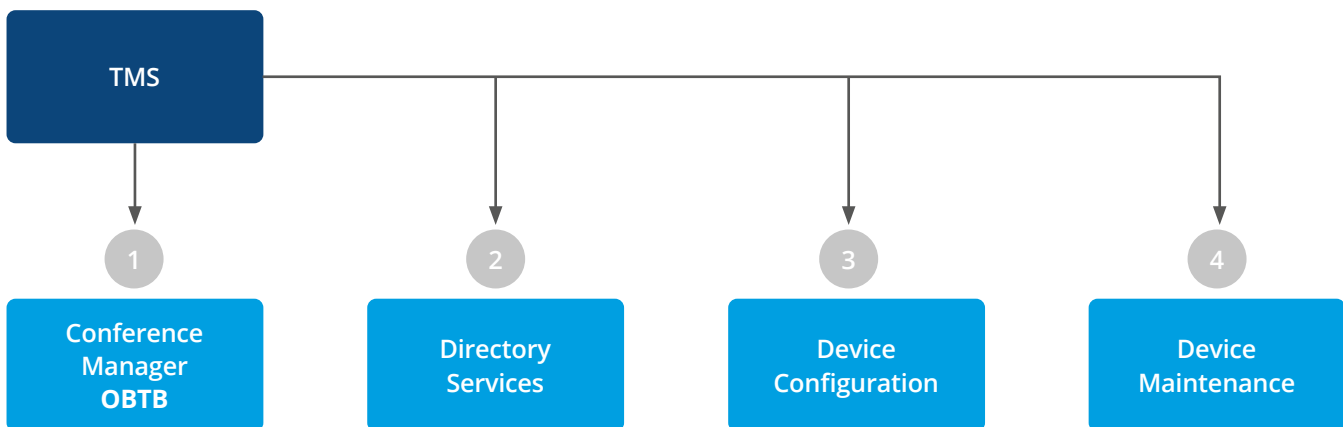

Migration Paths

Our migration paths, planning and support provided by the VQ services team and your Cisco partner will guide you through the process ensuring a smooth migration.

We expect customers will want to migrate services in phases, DMA is developed to enable this, with tools to aid migration, integration to TMS and CUCM, and an architecture to allow side by side operation of VQ DMA and Cisco TMS during migration.

DMA is provided in modules enabling individual services to be adopted and phased into production, a typical migration would look like:

1. All TMS 'Booking' moved to [VQ Conference Manager](#)
2. Switch endpoints to use [VQ DMA Directory Services](#) for 'PhoneBooks'
3. Migrate persistent [templates and bulk changes](#) to [VQ DMA Device Configuration](#)
4. Onboard [devices to Device Maintenance](#), now fully managed using [VQ DMA](#)

VQ's deployment assist service, working with our partners to plan and migrate to DMA ensures continuity of service with a smooth phased transition. Engage with us now to discuss how you can plan a TMS migration.
