

Deliver self-service conferencing in line with today's users' expectations

Web portal: for a Webex-style user experience

VQ Conference Manager's web portal gives users a Webex-style conferencing experience.

Schedule conferences, share meeting details and join planned or ad hoc calls, all in one place.

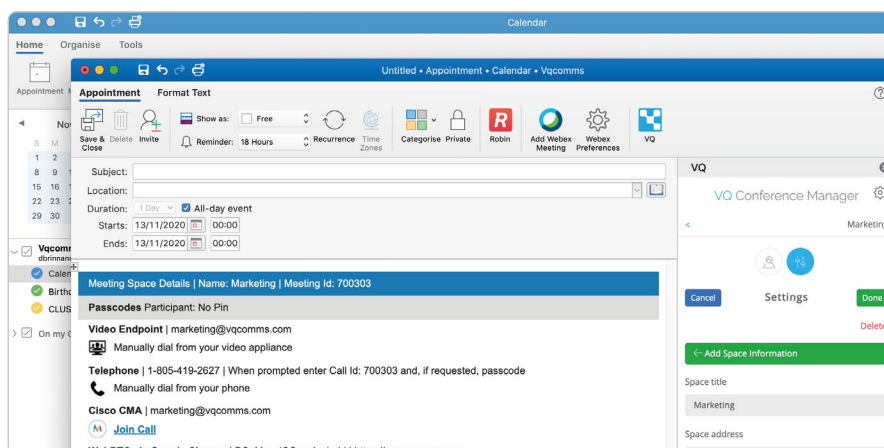

Users can also control their in-flight calls from the portal. This includes managing participants, altering video layouts and muting or unmuting people's audio.

Microsoft Outlook

End users can manage their Cisco Meeting Server calls and Spaces direct from Outlook 2016/2019 and Office 365 on Windows and macOS – tools they'll already be using to plan their days.

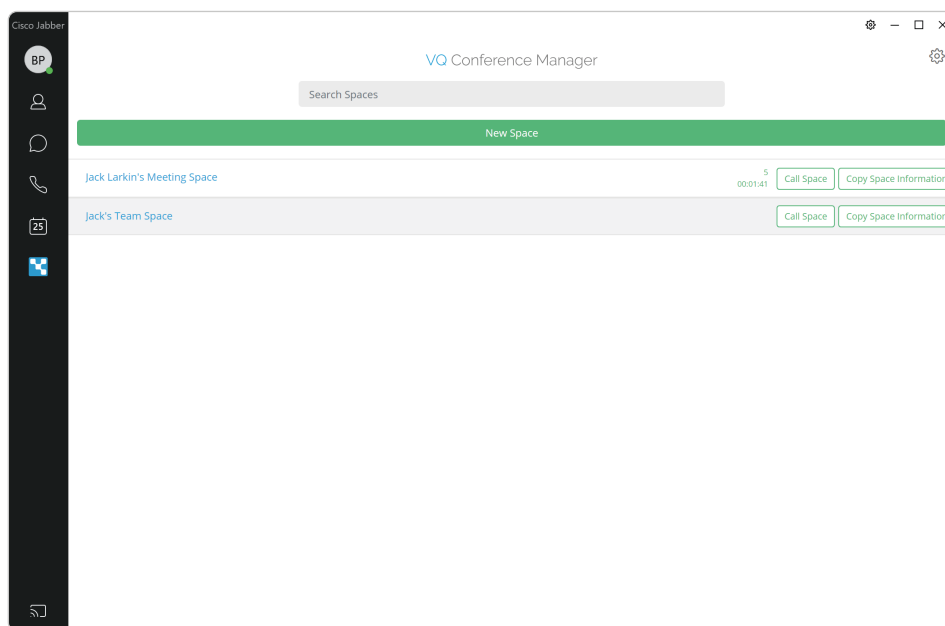

Individuals can create or remove meeting Spaces, update Space settings and change their PINs. And when a call is live, they can see who's joined and control audio and video settings. Organizations using older versions of Outlook can access certain features using the VQ Conference Manager Outlook Plug-in.

Cisco Jabber

If your organization uses Cisco Jabber, VQ Conference Manager's meeting Space and call-control features can be accessed through the Jabber desktop app.

Like in Outlook, individuals can manage their virtual meeting Spaces, change PINs and control live calls.

iPhone

Enable your conferencing users to control their calls and meeting Spaces on-the-go, with the VQ Conference Manager iPhone app.

The combination of the iOS app and Outlook integration gives your employees the convenience of managing their conferencing wherever they are, on their device of choice.
