

Lay the foundations for self-hosted collaboration on Cisco Meeting Server with the VQ Conference Manager core platform

Automate system and service setup, implement high-availability, and integrate with other enterprise applications – all underpinned by defense-grade security.

Who is the VQ Conference Manager core platform for?

VQ Conference Manager is for organizations looking to fast-track delivery of self-hosted collaboration services built on Cisco Meeting Server.

Every customer implementation includes our core platform. Then select one or more add-ons, to build the right unified communications service for your teams:

- ✓ **Meeting Services:** Set up your conferencing service, operate managed meetings, and offer self-service scheduling
- ✓ **Metro:** Premium self-service apps: Deliver premium self-service conferencing, with apps for desktop, mobile, web browser, and Cisco devices, plus integrations for Outlook and Microsoft Teams
- ✓ **Device Management and Automation:** Configure and maintain Cisco video devices at scale. The on-premises replacement for TMS, as recommended by Cisco
- ✓ **Analytics:** Access insights across Cisco Meeting Server, Cisco devices, Expressway, and more

VQ CONFERENCE MANAGER CORE PLATFORM

The VQ Conference Manager core platform provides the foundational security, resilience, automation, and APIs to underpin your self-hosted enterprise conferencing service.

System setup and automation

VQ Conference Manager accelerates and de-risks setup of Cisco Meeting Server and your wider conferencing service. It manages complex API command sequences and allows for automated, scheduled user provisioning via Active Directory/LDAP integration.

Defense-grade security

To support secure, private meetings at scale, VQ Conference Manager can be used in self-hosted and air-gapped environments.

It includes:

- ✓ User identity management via Active Directory/LDAP integration
- ✓ Single sign-on (SSO) and multi-factor authentication (MFA) via SAML 2.0 systems
- ✓ Role-based access control
- ✓ Multi-tenancy

A range of controls to keep meetings private is part of our Meeting Services product.

FIPS-compliant and DISA-validated

Rest easy, knowing your conferencing service is built on a FIPS-compliant platform, and has been independently validated by the US Defense Information Systems Agency (DISA) and Joint Interoperability Test Command (JITC). VQ Conference Manager is on the US Department of Defense Information Network (DoDIN) Approved Products List (APL).

Virtual appliance for ease of installation

VQ Conference Manager comes as a virtual appliance. Install or upgrade via drag-and-drop, or using a playbook.

Run it on your existing VMware infrastructure, or talk to us if you need additional hardware.

VQ CONFERENCE MANAGER CORE PLATFORM

High-availability

Boost resilience with two-node implementations for Meeting Services, Metro, and Analytics with automatic failover.

Three-node high-availability is coming soon.

API

Integrate existing enterprise systems with VQ Conference Manager, via our open, REST API.

For example, a growing number of large customers with their own room scheduling solution have replaced its Cisco TMS integration with a VQ Conference Manager integration.
