

# Multi-tenancy on Cisco Meeting Server

Use the same infrastructure to deliver bespoke video conferencing services to different customers or business units – for maximum ROI

## Same hardware, different customers

Get maximum use from your Cisco Meeting Server infrastructure

If you're a video conferencing service provider or organization with multiple business units, VQ Conference Manager enables you to operate more than one tenant on a single CMS or cluster.

## Securely ring-fenced

Each customer or division operates in its own environment

VQ Conference Manager thereby ensures you get maximum value from your Cisco Meeting Server hardware, as well as peace of mind from knowing tenants are securely separated.

## Convenient for your call operators

Oversee all the calls on your CMS system in one place, or assign specific tenants to specific operators

VQ Conference Manager enables your operations team to monitor all the calls they're responsible for, without switching between systems or tabs.

## Flexible operator permissions

Set up multi-tenancy to suit your requirements

Your system administrators can configure your call operators' permissions in any way you wish. This could be per tenant, per group of tenants or system-wide.
