

Video and audio conferencing reporting and analytics

Use VQ Conference Manager to monitor usage trends, demonstrate ROI, proactively identify service problems and plan for growth

Monitor system usage

All the data you need to see exactly how your video conferencing service is being used

VQ Conference Manager's built-in analytics include ready-made reports and powerful tools for your administrators to build their own. This enables you to see how, when and where your business is using video and audio conferencing.

Demonstrate ROI

Show that your service is delivering a return on investment

VQ Conference Manager comes with management reports that show how people are using your video and audio conferencing service. This makes it easy to show whether take-up is in line with your ROI forecasts.

Proactively address service issues

Improve in-call experiences by spotting problems before your users do

VQ Conference Manager's reports enable you to see where system issues – such as excessive packet loss – could be affecting calls. This enables you to make targeted improvements that encourage service uptake.

Plan for growth

Plan ahead to ensure you continue to meet your organization's demands for video and audio conferencing

Monitor usage trends to forecast when you'll need more capacity. Then use the reports and visualizations to support your business case for investment.

Create your own reports

Customize the ready-made reports, or create, view and share your own

VQ Conference Manager includes business intelligence tools that enable your administrators to create everything from high-level management reports to deep-dive technical reports, drawing on the complex state change data from Cisco Meeting Server.
